

### **Programme Specific Outcome for Honours Level Teaching**

The curriculum for Economics Honours course is immensely beneficial to the students of this course in multiple ways. Since mathematics is a widely used tool in economics, students acquire commendable knowledge in various branches of mathematics.

Application of statistical and econometric tools in the context of Indian economic problems accentuate further the knowledge of the students.

The course, specifically, the papers on Public Economics and Environmental Economics create awareness of environmental issues and address related policy issues.

Through the parts of the curriculum pertaining to development economics, Indian economy and International trade, liberalisation, international trade policies and contemporary development experiences in the world becomes clear to the students. Also the language skill of the students gets sharpened and polished.

The curriculum also makes students aware regarding finance markets and managerial issues through papers on Managerial Economics and Money and Financial Markets.

But, to top it all, the use of logical arguments in every matter of every branch of this curriculum inculcates tremendous logical prowess in each and every student. It helps to develop an ability to formulate logical and analytical approach to socio-economic problems.

### **Programme Specific Outcome for General Level Teaching**

The curriculum for Economics Generals course helps its students build the right frame of mind to view economic and socio-economic issues in their proper perspectives. The substantial theoretical knowledge imparted through microeconomics, macroeconomics and public finance (optional) helps them analyse an economic problem/issue with a focus on its theoretical underpinning. On top of it, a wide spectrum of ideas given through development economics and the curriculum on Indian economy provides them with a consciousness of what is shaping the current world around us.
